JONAS KIWIA

SOFTWARE ENGINEER | FULL-STACK DEVELOPER

Tanzania • +255 795 650 726 • jonasdeo02@gmail.com
jonaskiwia.netlify.app • github.com/JonasDeo • github.com/kibali-cell

PROFESSIONAL SUMMARY

Software Engineer focused on building full-stack web applications and practical software products. Experienced with Laravel, React, TypeScript, Python, REST APIs, relational databases and mobile development. Has worked across frontend and backend development, API integration, database design, debugging and deployment. Currently expanding practical machine-learning skills alongside a broad software engineering foundation.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, PHP, Java, SQL

Frontend: React, Vite, HTML, CSS, Tailwind CSS, Bootstrap

Backend: Laravel, FastAPI, Flask, REST APIs

Mobile: Flutter, React Native, Android (Java)

Data & Storage: MySQL, PostgreSQL, SQLite, Firebase Firestore, Redis

Tools & Platforms: Git, GitHub, Docker, Android Studio, Figma

Machine Learning: Scikit-learn, data preprocessing, classification and regression fundamentals

PROFESSIONAL EXPERIENCE

Freelance Software Developer | Remote | Jan 2024 – Present

- Design and build full-stack web and mobile applications for tourism and business clients using Laravel, React and TypeScript, including nativekilimanjaro.com.
- Develop REST APIs and database-backed features, integrate third-party services and connect front ends to backend services.
- Own delivery end to end, from requirements and implementation to testing, deployment and production troubleshooting.

IT Support Assistant | Tuleeni Home | Jul 2022 – Dec 2023

- Assisted with day-to-day IT operations and troubleshooting of hardware, software and network issues.
- Provided end-user support and guidance on the use of IT tools and systems.
- Helped maintain reliable IT operations and support internal users with technical issues.

SELECTED PROJECTS

Kitu Analytics — SME Financial Analytics & Credit-Scoring Platform

Laravel, React, Python, FastAPI, PostgreSQL, Docker, Redis

- Developing a full-stack platform that explores the use of financial transaction data, including M-Pesa-related data, to support SME analytics and credit assessment.
- Building application APIs and integrating a separate Python machine-learning service with the Laravel backend.
- Working across authentication, database migrations, service communication and containerized development using Docker.

Native Kilimanjaro — Tourism Website & Booking Platform | **nativekilimanjaro.com**

React, TypeScript, Vite, Tailwind CSS, Laravel, MySQL

- Built a tourism website for discovering tours and presenting travel experiences in Tanzania.
- Worked on frontend routing, responsive layouts, reusable UI and integration with a Laravel administration/API backend.
- Prepared the site for deployment and worked on technical SEO and website performance improvements.

Swahili SMS Spam Filter

Java, Android, Python, Scikit-learn

- Developed an Android application concept for identifying and filtering SMS spam in Swahili.
- Applied a logistic-regression classification approach and explored on-device message classification.

Travel Management API

Laravel, MySQL, REST APIs

- Built a REST API to support employee travel requests, approvals and reporting.
- Implemented authentication, role-based access control and database-backed endpoints for frontend integration.

EDUCATION

Software Engineering | Moringa School | Nov 2024 – Jul 2025

Completed a project-based software engineering programme focused on full-stack development.
